

A close-up photograph of a brown cow's head with a white stripe on its face. A large, yellow, cylindrical brush is being used to groom the cow's head. The brush has a blue curved frame and a metal pivot point. The cow is looking towards the right.

The revolution in cow comfort

DeLaval swinging cow brush SCB

Your solution – every day

We set ourselves a challenge, to make the number one cow brush even better. Now you and your cows can benefit from our improvements.

Essential cow comfort

DeLaval pioneered and patented the swinging cow brush: first to invent it, first in cow comfort. The unique, cow-friendly design lets it swing freely onto the cow's back or head, over and along her sides, making it essential for cow comfort. With DeLaval SCB, every cow in your herd can groom herself all round.

Good, better, best

This third generation of our swinging cow brush has a sleek blue curved frame. We designed the robust new rounded frame to swing and rotate the brush securely – for grooming cows on request 24 hours a day, 365 days a year. Two pivot points, one at either end of the curved arm, improve the grooming angles for smoother, even more cow-friendly movement.

Your DeLaval dealer

Your cow comfort – your profit

With DeLaval swinging cow brush SCB you can be sure that your cows are grooming themselves with bristles the right length and firmness to stimulate blood circulation. This improves cow health and performance. The latest research shows a significant reduction in clinical mastitis and up to one litre more milk/per cow every day from cows using DeLaval SCB. (Ynte H. Schukken and G. Douglas Young.)

Safety and performance

The unique design of DeLaval swinging cow brush SCB has safety built in. It rotates at a safe cow-friendly speed and will immediately stop if there is resistance. DeLaval SCB has sensitive overload protection against overheating and a significantly lower working temperature than the previous model. It also meets the protective criteria of IP55.

Saves energy

The energy saving automatic on/off control starts the brush rotating on demand and stops it within 10 seconds after use. The new design is also energy efficient using approximately a third less power than previous model.

Improves cow traffic – and comfort

Minimal installation space is needed for DeLaval SCB – but leave room for the cow queue! As the brush is so popular, it helps cow traffic flow if it is installed in the right place. It prevents cows from hurting themselves by scratching on any available surface. One brush can efficiently groom up to 60 cows, keeping them cleaner, healthier and more comfortable. And this brush operates more quietly than the previous model, for calmer, less stressed cows.

Easy to install and maintain

DeLaval SCB comes pre-mounted so it is easy to install: to mount it on a wall or a post. It is easy to maintain. The brush cylinder is easily removed for replacement or thorough cleaning.

Benefits for cow comfort

- Swinging cow brush grooms cows all over
- Essential for cow comfort
- Improves cow health and welfare

- Improves herd performance
- Easy to maintain and keep clean
- Low energy consumption

DeLaval swinging cow brush SCB – your solution, every day.
