

The Bioflex Freestall Mounting System is a rigid solution that is fully adjustable for both height and width. It was developed to be easily installed on building columns with limited need for intermediate posts.

This Innovative New Design features flexible rubber mounting blocks that allow the stall loops to flex on the fixed mounting rails with out the risk of them snapping back and injuring cows or farmers.

Why Opt For a BioFlex Stall Mounting System?

- Floating neck rail helps eliminate back injuries
- Maintains good cow habits seen with fixed stalls
- Helps keep bedding cleaner than with flexible stalls
- Allows stall divider to flex for additional cow comfort
- Firm enough to keep cows centered and lying straight
- Reduces injuries compared to fixed or unmovable stalls

BioFlex Free Stall System Features:

- Flexible rubber block mounting system
- Works with plastic or metal pipe neck-rail
- Floating neck rail with larger diameter pipe for gentle cow contact
- Double rail system provides structural strength
- Mounts sit above bedding for reduced corrosion
- Saves on labour and concrete during construction
- Ideal for deep bedded stalls using sand or compost
- Allows for adjustments in spacing width and height
- Mounts on building columns with no/limited intermediate posts required

The BioFlex free stall system is compatible with all of our loop styles, including the Y2K, J2K, H2K, and SY2K loop.

This product is patent pending in Canada and the USA
